

Barnacle's Ocean Friends

Hi Friends,

I meet so many amazing animals in the ocean. I would love for my friends to meet them too! Every month I will share a new ocean animal to learn about. I can't wait to discover more with you!

 Barnacles!

Minke Whales

Fun Facts

- Minkes are Baleen whales.
- Baleen whales don't have teeth. They have plates that look like a big toothbrush or comb! These plates help trap their food and let water drain out!
- Minkes are one of the smallest baleen whales- but they are still about as big as a school bus!
- Common minke whales have white patches on their flippers called 'Minke Mittens'
- They are sometimes called 'Stinky Minkes' because their breath smells like fish!
